

Tor: Privacy for Everyone

Roger Dingledine, The Tor Project

Tor Overview

Online anonymity: open source, open network

Community of devs, researchers, users, relay operators

US non-profit organization with 50ish staff

Estimated 2,000,000 to 8,000,000 daily users

Part of larger ecosystems: internet freedom, free software, censorship resistance, anonymity research

Attorney General Bill Barr Will Ask Zuckerberg To Halt Plans For End-To-End Encryption Across Facebook's Apps

"We are writing to request that Facebook does not proceed with its plan to implement end-to-end encryption across its messaging services without ensuring that there is no reduction to user safety."

A Simple Design

Equivalent to most commercial proxy/VPN providers.

A Simple Design

A Simple Design

Timing analysis lets an observer match up connections.

The Tor Design

Multiple relays so no single relay can link Alice to Bob.

I'm a political activist, part of a semi-criminalized minority.

In my younger years I entered the public debate openly, and as a result got harassed by government agencies. I later tried to obfuscate my identity, but I found that my government has surprisingly broad powers to track down dissidents.

Only by using anonymizing means, among which Tor is key, can I get my message out without having police come to "check my papers" in the middle of the night. **Tor allows me freedom to publish my message to the world without being personally persecuted for it.**

—Anonymous Tor User

I'm a doctor in a very political town. I have patients who work on legislation that can mean billions of dollars to major telecom, social media, and search concerns.

When I have to do research on diseases and treatment or look into aspects of my patients' histories, I am well aware that my search histories might be correlated to patient visits and leak information about their health, families, and personal lives. **I use Tor to do much of my research when I think there is a risk of correlating it to patient visits.**

Total relay bandwidth

Tor's **safety** comes from **diversity**

1. Diversity of relays. The more relays we have and the more diverse they are, the fewer attackers are in a position to do traffic confirmation.
2. Diversity of users and reasons to use it. 50000 users in Iran means almost all of them are normal citizens.

Transparency for Tor is key

- Open source / free software
- Public design documents and specifications
- Publicly identified developers

Transparency for Tor is key

- Open source / free software
- Public design documents and specifications
- Publicly identified developers
- Not a contradiction: privacy is about choice!

Technology is not neutral

Power imbalances are central to Tor: it's more useful to vulnerable people than those who already have power.

Technology is inherently political!

Pluggable transports

Snowflake pluggable transport

Snowflake makes your traffic look like a WebRTC (zoom, jitsi, skype, signal, etc) call, and those are allowed in many parts of the world.

People can volunteer as Snowflake proxies simply by installing an extension in their browser.

The resulting volume and variety of volunteers gives us more options on how to distribute them to users.

Daily snowflake users

Leveraging the Tor Network to circumvent blocking of BBC News content

Wednesday 30 October 2019, 8:18

Abdallah al-Salmi
Strategy Analyst, BBC News

Tagged with: [BBC News](#), [BBC World Service](#), [Media Distribution](#), [Public Service](#)

COMMENTS

The BBC World Service's news content [became available on the Tor Network last week](#) in a move that attracted wide media attention.

The decision to go ahead with setting this service up came at a time when BBC News is either blocked or restricted in several parts of the world.

For example, in Egypt, Iran and China, our audiences are finding it either impossible or difficult to access our content without the use of a circumvention tool, such as a VPN.

The Tor Network is an overlay network on the internet, which provides increased security and is resistant to blocking.

About this Blog

Staff from the BBC's online and technology teams talk about BBC Online, BBC iPlayer, BBC Red Button and the BBC's digital services. The blog is reactively moderated. Your host is Jonathan Murphy.
